

Learning from Learners: E-QUALising Diverse Higher Education Landscapes

Second Student Conference at Ambedkar University Delhi
19-20 February 2016, New Delhi.

The conference aims to map student learning experiences related to diverse learning environments and challenges focusing not only learning technologies and pedagogies but also learning experiences.

Key Questions !

What can we learn from India's diverse student population, including those who do not inhabit the imagined Indian HE 'mainstream' of urban centres or model institutional campuses?

Is there a 'digital divide', or are there digital fragments, across Indian (and European) higher education and social environments?

What 'connectivity' challenges exist for learners on the margins (variously defined) and how can technology-enabled learning systems address these concerns?

What challenges arise in applying technological fixes (e.g., through 'blended learning') to specific learning conditions or environments?

Which learning technologies and pedagogies can most effectively address learners' concerns about their present and futures?

Highlights

Total Participants - 103

Faculty	10
Government Official	4
PhD Scholar	4
Postgraduate Student	30
Professional	17
Researcher	7
Undergraduate Student	31

Abstracts

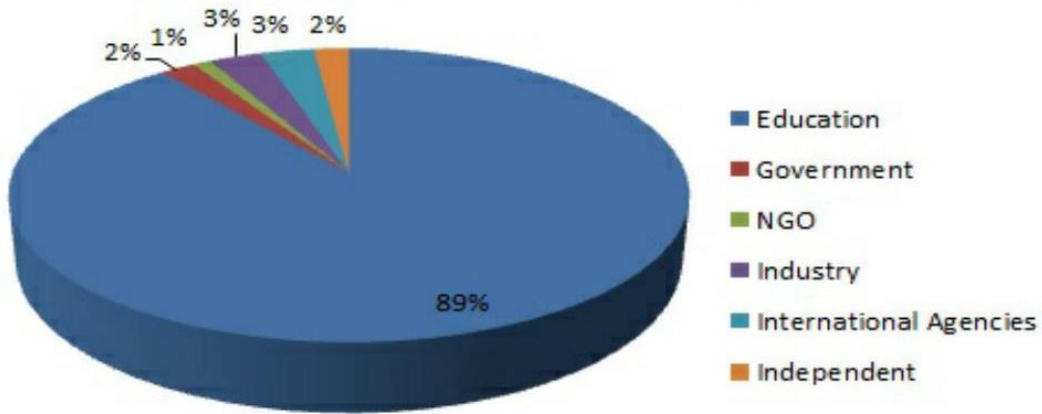

44 - Abstracts Received

21 - Abstracts Presented
